Re: Marketing Graphic Designer

Application — Warsaw

Dear SPRIBE team,

I am writing to apply for the Marketing Graphic Designer role at SPRIBE. I've been following the company since Aviator turned crash games into a category — the speed, the visual confidence, the way the brand communicates without overexplaining anything. That's the kind of work I want to make.

I currently split my time between two practices. As Art Director at Salt and Pepper in Warsaw — one of Poland's most recognised independent agencies — I work on brand identity, visual systems and campaign work for clients across hospitality, retail and fashion. In parallel, I run Davidova Studio, an independent CGI practice focused on product visualization and brand-led imagery for fragrance, cosmetics and FMCG. The studio website, design system and the four current case studies were built and coded by me.

What I bring to a marketing design role is a combination that is rare: the speed and asset-system thinking of an in-house designer, the brand instinct of an agency art director, and a full CGI pipeline I can deploy when a campaign needs more than 2D. I have shipped mobile-first creative for paid social, on-site placements and brand launches; built design systems that hold across formats and regions; and worked tightly with copy, strategy and motion teams to keep visual quality consistent at speed. SPRIBE's product and audience scale (77M+ monthly players) is exactly the kind of environment where that breadth becomes useful.

My full portfolio and case studies are at davidova.studio. I would be glad to walk you through any project in detail. Thank you for considering my application — I would welcome the chance to discuss the role and how I could contribute to the team.

Warm regards,

Alexandra Davidova
